TEXTBOOK

2008

Definitive Book of Handwriting Analysis: The Complete Guide to Interpreting Personalities, Detecting Forgeries and Revealing Brain Activity through the Science of Graphology. The book has three sections: Part I: Behavioral Profiling; Part II: Neurophysiology of Handwriting; Part III: Questioned Documents. The main focus is the scientific examination of handwriting with direct application to questioned documents. For instance, the first section devotes 55 pages to the psychogram, which is a chart that measures 40 graphic variables on a 1-10 scale. This instrument thus has cross purposes. It can be used for behavioral profiling, scientific studies (because handwritings can now be converted to mathematical scores) and to questioned documents. Dr. Robert O'Block, founder of the American College of Forensic Examiners said of the book that it is "the best written on the subject in 10 years!"

RESEARCH & EXPERIENCE

- 2005 Stroke victims. Longitudinal studies of two individuals who suffered strokes. Almost a daily accounting in one instance of neurological changes and brain trauma as strokes continued.
- 2002 Handwriting and brain trauma. MRI studies of multiple sclerosis and coma victim working with Department of Neurology, School of Medicine, Brown University, Syed Risvi, M.D., specialist in multiple sclerosis and neuro-immunology, Rhode Island Hospital, and Lorcan O'Tuama, M.D. Chief of Neuroradiology, VA Medical Center.
- 2000-91 Fraud Unit, DHS and Food Stamps, Department of Attorney General's Office, RI Topology for fraud cases recently investigated include disguise in handwriting by change of slant, handedness, capital letters, use of print-script instead of cursive, scribbling of exemplars, reduction of size, reversion to Palmer. Over 1000 handwritings involved in study.
- 1994 The Lawyer's Group, Waterbury, CT. \$100,000,000 real estate scandal on Wall Street and in Connecticut involving numerous forgeries including free-hand forgeries, tracings and combinations thereof.
- 1993 British Institute of Graphology. Conscious, preconscious and unconscious determinants in handwriting. The least conscious aspects of a writing, such as beginning and ending strokes, use of diacritics, small interior loops, have implications for both branches of the field, for psychological assessment and separately for purposes of handwriting identification.
- 1992 Braintree Hospital, MA. Brain damage affects on handwriting in coma victim, head injury from car accidents. Handwriting samples analyzed before and after accident and during stages of recovery.

- 1984-88 University of California at Los Angeles. Neurophysiological investigation of the handwritings of split-brain (epileptic) patients for Warren TenHouten, Ph.D., and Joseph Bogen, MD. Separated these individuals from matches normal pairs on a blind basis by using an objective graphological scale.
- 1985 Saybrook Institute, San Francisco. Longitudinal study of 40 years of the handwriting of inventor Nikola Tesla. Discovered severe disruption of writing trail in 1906 samples which paired with possible nervous breakdown.
- 1981 National Society for Graphology, New York, NY. Questioned Documents Examination: Clifford Irving forgery and the Howard Hughes Mormon Will.
- 1972-73 Billings Hospital, University of Chicago. Muscle pathology and neurophysiological investigations of the handwritings of schizophrenics and normals for David Goode, MD, and Herbert Meltzer, MD. Successfully differentiated between two groups in blind study using objective handwriting measuring scale.

SPECIALIZED TRAINING IN DOCUMENT EXAMINATION
